AnjaniPutra Properties — Go-live steps

Plots & flats website · Admin panel · October 2026 · Full detail: docs/LAUNCH-CHECKLIST.md

Blocker: step 1 (legal advice on showing project RERA numbers) should be settled before the site goes live. Deploy **only the `site` folder**. `docs/` and `apps-script/` must never be published.

A. Collect first

Information & decisions

- [ ] 1 Ask a lawyer whether each listing must show the project's RERA number.
- [ ] 2 Get the agent's own MahaRERA agent registration number (starts with `A5…`).
- [ ] 3 Get written permission from each developer to advertise their plots and prices.
- [ ] 4 Get a photo of the agent.
- [ ] 5 Buy a domain name, e.g. `anjaniputraproperties.in`.

B. Set up the admin panel

About 20 minutes

- [ ] 6 Open the Google Sheet that has the **Leads** tab → **Extensions** → **Apps Script**.
- [ ] 7 Paste in the three files from `apps-script/`: `leads.gs`, `admin.gs`, and an HTML file named exactly `Admin`.
- [ ] 8 Pick `setup` in the function dropdown → **Run** → allow the permissions it asks for.
- [ ] 9 **Project Settings** → **Script properties** → add `ADMIN_PIN` (6–8 digits).
- [ ] 10 **Deploy** → **Manage deployments** → ✏️ **Edit** → **New version** → **Deploy**.
- [ ] 11 Open the Google address in a browser and check that the PIN screen appears.
- [ ] 12 Turn on email alerts for new enquiries: in the sheet, **Tools** → **Notification settings**.

C. Add real listings

The agent, from his phone

- [ ] 13 The agent logs in and replaces every sample plot and flat with real details and photos.

D. Fill in the website settings

Small text edits in site/

- [ ] 14 In `index.html`, set `LISTINGS_FEED_URL` to the Google address followed by `?feed=csv`, and set `AGENT_RERA`.
- [ ] 15 In `index.html`, empty `__CSV_URL__` (it still points to the old flat listings).
- [ ] 16 In `assets/js/ga4.js`, replace `G-XXXXXXX` with your Google Analytics ID.
- [ ] 17 Find and replace `YOUR-DOMAIN` with your real domain across the whole `site/` folder.
- [ ] 18 Add the agent's photo and a 1200×630 share-preview image.

E. Go live

Cloudflare Pages · free

- [ ] 19 Create a free Cloudflare account → **Workers & Pages** → **Create** → **Pages** → **Upload assets** → drag in the **`site` folder only**.
- [ ] 20 Under **Custom domains**, connect your domain. HTTPS turns on automatically.
- [ ] 21 Back in Apps Script, add the `SITE_URL` script property with the live address.

F. Test on the live site

Before announcing it

- [ ] 22 On an Android phone, an iPhone and a desktop, check the filters, the details pop-up, Call, WhatsApp, and the form.
- [ ] 23 Send a test enquiry. It should reach the sheet, send the email alert, and appear in the admin panel's **Enquiries** tab.
- [ ] 24 In the admin panel, add a test plot, check it appears on the site, then hide it and delete it.
- [ ] 25 Put **yourdomain/admin** on the agent's home screen and walk him through `ADMIN-GUIDE.md`.

G. After launch

First few weeks

- [ ] 26 Submit the sitemap in Google Search Console.
- [ ] 27 Update the Google Business Profile with the website link.
- [ ] 28 Add real buyer reviews once you have them.
